

How to run script using mysql workbench

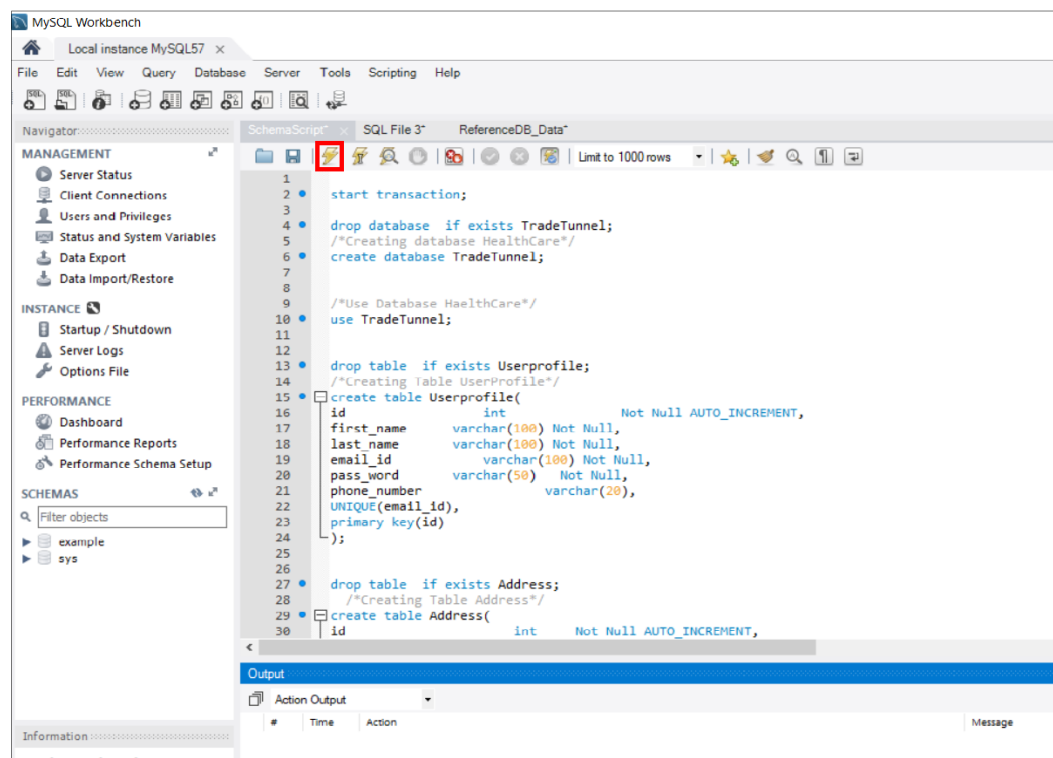

- **Launching MySQL Workbench**

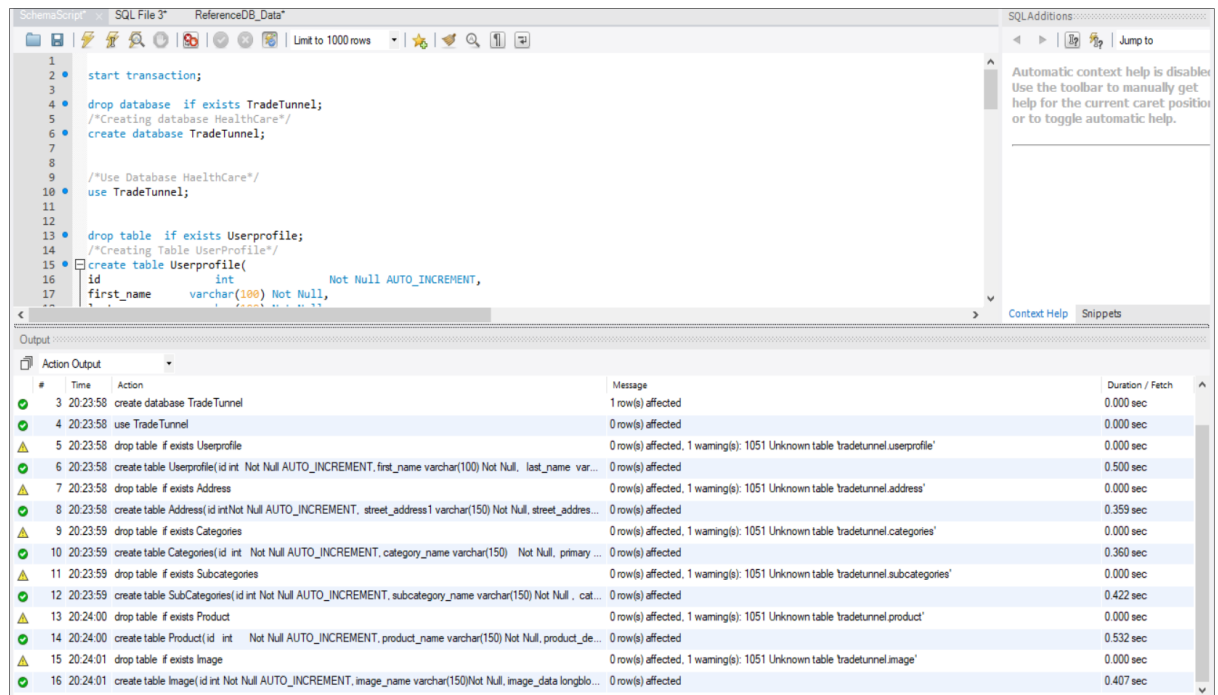

Launch the MySQL workbench. Enter the password. On entering right credentials, you will be redirected to the below page

- **Creation of database:**

Run the schemascript named 'SchemaScript.sql' by clicking on the highlighted button. If the database titled 'TradeTunnel' doesn't exist, it will create one.

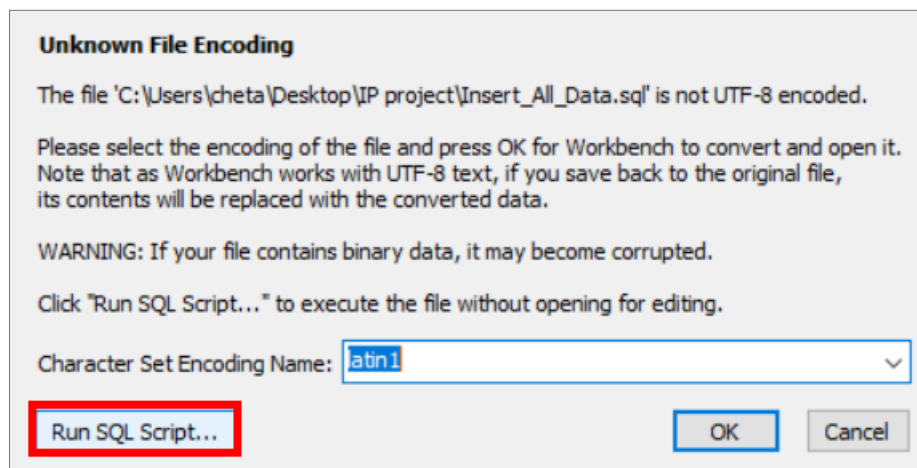

The database is created.

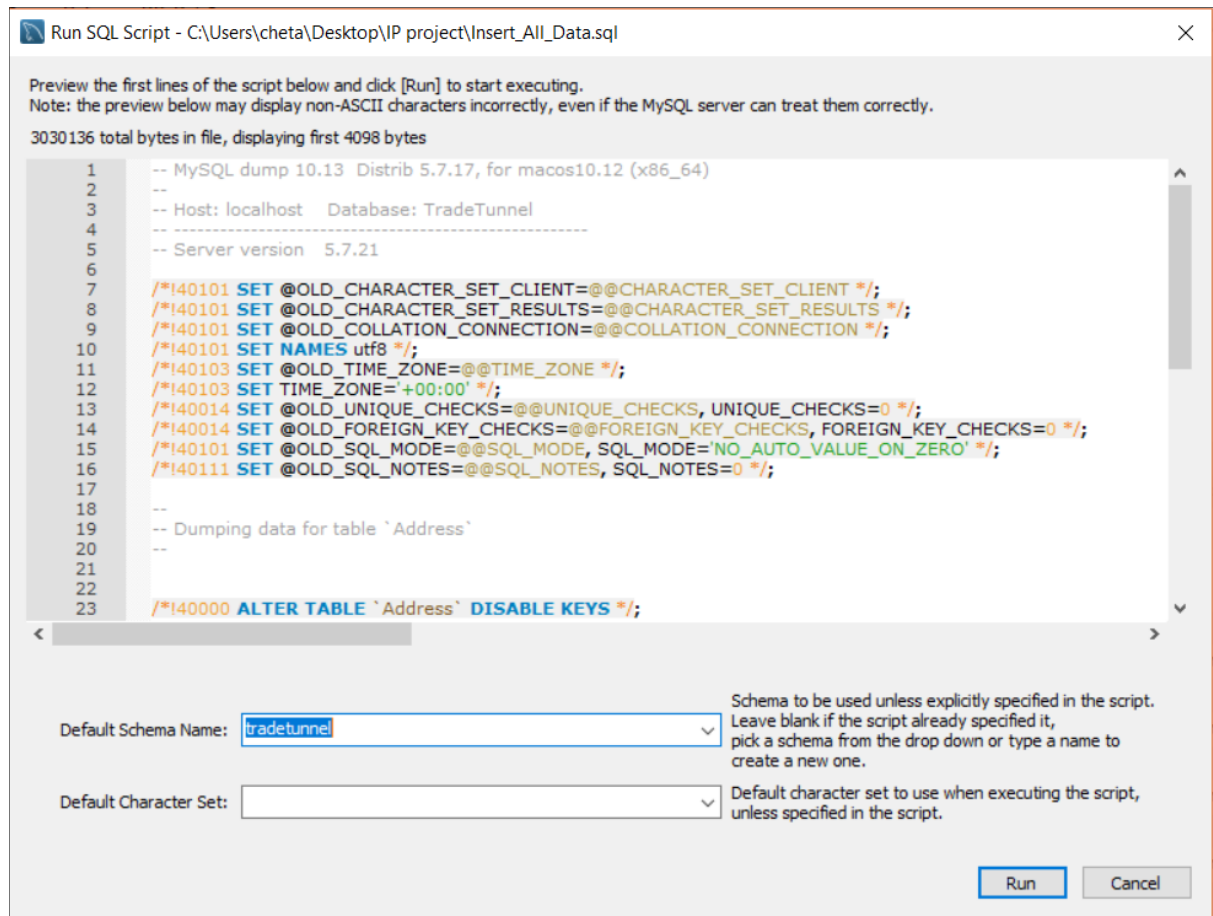

- **Populating the database:**

Open the schemascript named 'instanceData.sql'. Now click on the highlighted option of 'Run SQL Script'. Next window pops up.

Select the 'tradetunnel' option from the default schema name from the dropdown. Click on the 'run' button.

The database is populated with the data.
